QUESTION? OF THE MONTH:

A 36-year-old man is evaluated for a 10-day history of abdominal cramping, diarrhea, malaise, and nausea. Diarrhea is watery without mucus or blood. He returned 2 weeks ago from a 7-day trip to Lima, Peru.

On physical examination, temperature is 37.7 °C (99.9 °F); the remaining vital signs are normal.

On abdominal examination, bowel sounds are present with diffuse tenderness to palpation. The abdomen is not distended; no guarding or rebound is noted.

Stool polymerase chain reaction assay is positive for Cyclospora.

Which of the following is the most appropriate treatment?

- A. Atovaquone
- B. Metronidazole
- C. Pyrimethamine
- D. Quinacrine
- E. Trimethoprim-sulfamethoxazole

ANSWER: E. Trimethoprim-sulfamethoxazole
